Chat-Contexts

- Chat contexts adjust the AI's behavior/responses (system prompts)
- They contain specific instructions that apply only to a particular chat
- Users can create and switch between unlimited chat contexts
- Chat contexts are user-specific and available across all workspaces
- Can be combined with prompt catalogs and knowledge bases

Examples

- Assisting with writing slides or LinkedIn posts
- Answering similar recurring inquiries
- Summarizing texts with a focus on specific aspects

Chat contexts improve prompting by making it more efficient, targeted, and faster, as users don't have to repeatedly instruct the AI on what to do from scratch.
